<b>1.3</b>	<b>December 3, 2020</b>	Added appendix 4	Derek Manchee

# **1 Introduction**

## ***1.1 Identification***

This document applies to the software development effort in support of the development of the Open-Source Integration project Version [1].

## ***1.2 Scope***

This project was developed for the Harrison. The purpose of this project is to develop an interface that can receive HL7 v2.x messages of the entity type A01, A03 and A08 and store them in a database. The interface will then be able to retrieve and display these messages in table format.

## ***1.3 Document Overview***

The purpose of the Open-Source Integration Software Development Plan (SDP) is to guide project management during the development of this project. Requirements for the project will be captured in the Open-Source Integration Software Requirements Specification (SRS). This plan will be placed under configuration management controls according the Open-Source Integration Software Configuration Management Plan. All aspects of the design will be found in the Open-Source Integration Design Documentation.

## ***1.4 Relationship to Other Plans***

There are several other documents which support the information contained within this plan. These documents include: Software Configuration Management Plan, Software Requirements Specifications and the design document.

# **2 Acronyms and Definitions**

GUI – Graphical User Interface.

H17 – A standardized message format for passing medical and health related messages.

RUP – A standard for designing and structuring development of projects

# **4 Overview**

The project schedule in support of the project Open-Source Integration was initiated October 19, 2020 with a target completion date of December 7, 2020. Incremental product deliveries may be requested, but none are identified at this time. The delivery requirements are to build a fronted listener that will parse HL7 v2.x messages into JSON objects and a backend python script that will insert these objects into a MySQL database. The frontend will also have an interactive GUI to bring up patient info stored in table format. The Open-Source Integration project will be delivered once the code and documentation has been delivered and, Harrison accepts the product.

## ***2.1 Source Code***

There are no requirements for source code deliverables. If Harrison requests the source code, it will be available on bit-bucket.

## ***2.2 Documentation***

Open-Source Integration documents will be stored on the projects bit-bucket and overleaf accounts.

## ***2.3 Project team***

Benson-Client  
Derek Manchee-Scrum Master/developer  
Bao Mai-developer/product owner  
Aubrey Nickerson-developer  
Keaton Canuel-developer  
Joseph Egely-developer

# **4 Software Process**

## ***4.1 Software Development Process***

This product will be developed using scrum and agile alongside RUP. This means the project will be iterative and focus on testing all modules separately as well as testing them as a whole. By following RUP format, the development will be split into 4 segments. Inception will focus on researching the product to be made, for this project what HL7 messaging is and how it is formatted. Elaboration phase will focus on design and documentation, as well as a preliminary prototype. Construction will focus on building and coding the Open-Source Integration project. In the transition phase

refactoring the code and setting up the handover of the project will be the focus as well as any last-minute bug fixes.

#### **4.2 Risks assessment**

	Acceptable	Tolerable	Critical
Not Likely			Server crash
Possible			
Probable	Midterms		

- Midterms-other class midterms might take away developer's time and make scheduling meetings harder
  - To deal with this some members will have to work on own a lot more outside meetings and keeping team members up to date on project status with Jira and discord will be more important
- Server crash or Deletion of repository- (unlikely, major impact)
  - To prevent total loss of project team developers will store code locally and backup local files periodically

### 3 Schedule

- Elaboration
  - November 2, 2020
    - Project management schedule finished
    - Systems Requirements started
    - Design document 50% done
    - Business document done
    - Listener finished
    - Backend set up for v2.1 message testing
  - November 4, 2020
    - Meeting with client
    - Configuration documentation started
- Construction Sprint
  - November 9, 2020
    - System Requirements and Design Documentation finished (update as necessary)
  - November 16, 2020
    - Project set up for v2.8 messages
    - Start on graphic user interface to interact with database and show patient information
  - November 18, 2020
    - Meeting with client
- Transfer Sprint
  - November 23, 2020
    - fix anything that still is not working
    - Refactor code
    - All documentation Updated
    - Change documents to latex
  - December 4, 2020
    - Project ready GUI is developed with search functionality based off first and/or last name and listener, sorting and storing messages works for v2.x HL7 messages
    - End of final sprint submit project
  - December 7, 2020
    - Present project

# Appendix A Sprint 1 Retrospective, Backlog and Standups

## 2020-10-26 Retrospective sprint 1

Created by derek manches on Oct 26, 2020

Date: 26 Oct 2020

Participants: @derek manches @Aubrey Nickerson @Bao Mai @Keaton Canuel @Joseph Egely @Youry Khmelevsky

### Retrospective

#### What did we do well?

- @Keaton Canuel - assigned tasks well
- @Bao Mai - balanced tasks well
- @Aubrey Nickerson - good end diagram
- @Joseph Egely - good communication
- @derek manches - balanced tasks

#### What should we have done better?

- @Keaton Canuel - better time reporting
- @Bao Mai - more meetings
- @Aubrey Nickerson - more research on api listeners
- @Joseph Egely - more planned team meetings
- @derek manches - more team meetings

### Actions

- ☐ @Keaton Canuel @Bao Mai @Joseph Egely - find times where two of you can work together on listener maybe 2h with each partner
- ☐ @derek manches @Aubrey Nickerson - work together wed... and weekend to finish database table creation and start the sql insertions

# Appendix B Sprint 2 Retrospective, Backlog and Standups

## 2020-11-16 Retrospective

Created by derek manchee on Nov 16, 2020

Date	📅 09 Nov 2020
Participants	@ derek manchee @ Bao Mai @ Aubrey Nickerson @ Joseph Egely @ Keaton Canuel

### Retrospective

#### What did we do well?

- @ Joseph Egely -documentation and task completion
- @ Keaton Canuel -even task assignment
- @ Aubrey Nickerson -researching listener
- @ Bao Mai -documentation and task completion
- @ derek manchee -getting all tasks done

#### What should we have done better?

- @ Joseph Egely - more meetings to work together on tasks
- @ Keaton Canuel -better time management
- @ Aubrey Nickerson -have more effective meetings
- @ Bao Mai -attend meetings
- @ derek manchee -do not miss scheduled meeting or give notice if you will

OE Sprint 2 16 issues **ACTIVE** 26/Oct/20 2:00 PM • 09/Nov/20 2:00 PM View linked pages

get listener built and testedstart sorting through and parsing messages to back endbuild tables in backend start insertion code into tables

Joseph Egely - 04/Nov/20	
Continued A08 JSON sorting - 1h	
Architecture doc - 1h	
Finish JSON sorting -1h	
Comments (0)	
Comment standup	
Bao Mai - 04/Nov/20	
Client meeting (.5hrs)	
finish sys requirement specification (1hrs)	
research on flask (2hrs)	
finish up the message sorting (1hrs)	
Comments (0)	
Comment standup	
derek manchee - 04/Nov/20	
meeting for acceptance and setting up presentation -(0.45h)	
project management doc (.5h)	
work with joe to get design diagrams (1h)	
Associated Issues:	
Project management plan doc. Done	
Comments (0)	
Comment standup	
Keaton Canuel - 04/Nov/20	
store parsed variables to json objects - 1.5hrs	
acceptance test - 0.5hrs	
client meeting - 0.5hrs	
message sorting/parse for json - 1hr	
Comments (0)	
Comment standup	

## Appendix C Sprint 3 Retrospective, Backlog and Standups

Created by derek manchee on Nov 23, 2020

## Retrospective

13

## Completed Issues

[View in Issue navigator](#)

Key	Summary	Issue Type	Priority	Status	Story Points (16 → 22)
OE-6	Develop GUI to display PID and PV1 Segments of the ADT message	Task	Major	DONE	- → 4
OE-11	software design doc draft 1	Story	Major	DONE	2
OE-12	software configuration doc	Story	Major	DONE	2
OE-17	sort incoming message into objects for ao1	Task	Major	DONE	2
OE-18	sort incoming message into objects for ao3	Task	Major	DONE	2
OE-19	sort incoming message into objects for ao8	Task	Major	DONE	2
OE-27	create json objects for v2.8 required	Task	Major	DONE	2
OE-50 *	Set up Flask & Cordova	Task	Major	DONE	1
OE-51 *	Allow remote connection to database	Task	Major	DONE	1
OE-52 *	Test Flask and Cordova connection	Task	Major	DONE	1
OE-54 *	Test Cordova and Database Connection	Task	Major	DONE	1
OE-55 *	Create Unit test	Task	Major	DONE	- → 2

## Issues Not Completed

[View in Issue navigator](#)

Key	Summary	Issue Type	Priority	Status	Story Points (- → 1)
OE-28	store diagnosis msg in json object	Task	Major	TO DO	-
OE-29	store event type msg in json object	Task	Major	TO DO	- → 1
OE-30	store guarantor msg in json object	Task	Major	TO DO	-
OE-31	store patient identification msg in json object	Task	Major	TO DO	-
OE-32	store patient additional demographic msg in json object	Task	Major	TO DO	-
OE-33	store next of kin msg in json object	Task	Major	TO DO	-
OE-34	store patient visit msg in json object	Task	Major	TO DO	-
OE-35	store patient visit additional information msg in json object	Task	Major	TO DO	-
OE-36	store disability msg in json object	Task	Major	TO DO	-
OE-37	store observation/result msg in json object	Task	Major	TO DO	-
OE-38	store patient allergy information msg in json object	Task	Major	TO DO	-
OE-39	store diagnosis related group msg in json object	Task	Major	TO DO	-
OE-40	store procedures msg in json object	Task	Major	TO DO	-
OE-41	store insurance msg in json object	Task	Major	TO DO	-

## Appendix D Sprint 4 Retrospective, Backlog and Standups

Pages / An Open-Source Engine 1 Jira link

### 2020-12-03 Retrospective sprint 4

Created by derek manchee less than a minute ago

Date	03 Dec 2020
Participants	@derek manchee @ Bao Mai @ Aubrey Nickerson @ Joseph Egely @ Keaton Canuel

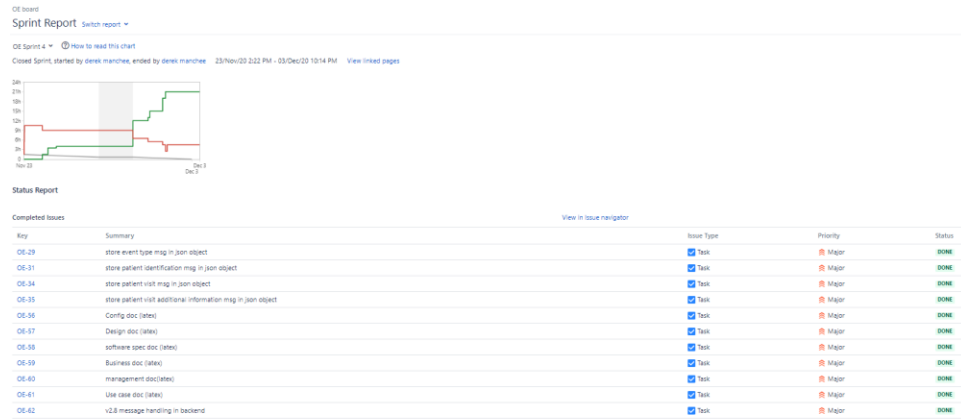

#### Retrospective

##### What did we do well?

- @ Bao Mai focused on most important tasks
- @ Aubrey Nickerson Peer programming efficiency
- @ Keaton Canuel Most important tasks done
- @ Joseph Egely Meeting attendance
- @ derek manchee Efficient meetings

##### What should we have done better?

- @ Bao Mai Identify most important tasks earlier
- @ Aubrey Nickerson Identify tasks at start of sprint
- @ Keaton Canuel Task distribution
- @ Joseph Egely Better distribution of tasks
- @ derek manchee Played to each others strengths better

<p>▼ <b>Aubrey Nickerson - 23/Nov/20</b></p> <ul style="list-style-type: none"> <li>✓ Finished GUI (4h)</li> <li>⚠ Help with sorting messages (1h)</li> </ul> <p>&gt; Comments (0)</p> <p>Comment standup</p>	<p>🕒 <b>Aubrey Nickerson - 24/Nov/20</b></p> <ul style="list-style-type: none"> <li>✓ Added comments to all code (1h)</li> <li>⚠ Meeting with team (1h)</li> <li>✓ Help sort messages (2h)</li> <li>✓ Work on Config doc (1h)</li> </ul> <p>Associated Issues:</p> <ul style="list-style-type: none"> <li>✓ <a href="#">QE-34</a> store patient identification msg in json object, Done</li> <li>✓ <a href="#">QE-56</a> Config doc (latex), Done</li> </ul> <p>&gt; Comments (0)</p> <p>Comment standup</p>
